Theorie der Integralgleichungen.

[Vorlesung gehalten im 1908.]

# Chapter I.

## Origin of Integralequations. [Randwertaufgabe]

$x+iy$  + a complex variable, function  $\Rightarrow u+iv$  +  $z \in \mathbb{C}$ ;  $u, v$   
 Cauchy, differential equation  $\Rightarrow$  satisfy  $\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}, \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x}$ .

$$\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}, \quad \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x}.$$

$\Leftrightarrow$ ,  $\Rightarrow$  relation  $u, v$  +  $z \in \mathbb{C}$ ,  $u+iv$  +  $z+iy$ , function +  $i$ .

$$\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0, \quad \frac{\partial^2 v}{\partial x^2} + \frac{\partial^2 v}{\partial y^2} = 0. \quad \text{Laplace's equation}$$

$\Rightarrow$  any integral  $u(x, y)$   $\Leftrightarrow$   $v(x, y)$  correspond  $z \in \mathbb{C}$   
 $v \Rightarrow$   $u$   $\Leftrightarrow$   $v$   $\Rightarrow$   $u$

$$v = \int_{(x_0, y_0)}^{(x, y)} \left( -\frac{\partial u}{\partial y} dx + \frac{\partial u}{\partial x} dy \right)$$

$\frac{\partial}{\partial y} \left( -\frac{\partial u}{\partial y} \right) = \frac{\partial}{\partial x} \left( \frac{\partial u}{\partial x} \right)$  + a condition  $\Leftrightarrow$  satisfy  $z \in \mathbb{C}$ ;  $\pm$  1 integ.  
 $\Rightarrow$  exist  $z$ .  $\Leftrightarrow$   $\frac{\partial^2 u}{\partial y^2} + \frac{\partial^2 u}{\partial x^2} = 0$  +  $u$   $\Leftrightarrow$  satisfy  $z$ .

$u$   $\Leftrightarrow$   $v$   $\Rightarrow$   $v$  uniquely = "定  $z \in \mathbb{C}$ ",  $z_0 + i$  constant  
 $\Rightarrow$  arbitrary +  $i$ .

Laplace equation, solution  $\Leftrightarrow$  Harmonic function +  $i$ .

Logarithmic potential  $\Leftrightarrow$  Laplace equation  $\Rightarrow$   $\Leftrightarrow$   $z \in \mathbb{C}$ .

[参考]

### Harmonic Functions.

$xy$ -plane  $\mathbb{C} = \mathcal{S} + i\mathcal{C}$  Gebiet  $\mathbb{C} \rightarrow \mathbb{R}^2$ ,  $\mathcal{S} \neq \emptyset \Rightarrow u(x,y) + iv(x,y)$  function  $f$ ;  $\mathcal{S} \cap \mathcal{C}$  properties  $\Rightarrow \mathcal{S} \cup \mathcal{C} = \mathbb{C}$ ,  $u \neq v$   $\mathcal{S} + i\mathcal{C}$  Gebiet.  $1 \neq \emptyset \Rightarrow$  Harmonic function  $+ i$   $\mathcal{S} + i\mathcal{C}$ .

- i)  $u, v$  eindeutig und stetig auf  $\mathcal{S}$ ,
- ii)  $\frac{\partial u}{\partial x}, \frac{\partial u}{\partial y}$  exist, eindeutig und stetig in  $\mathcal{S}$ ,
- iii)  $\frac{\partial^2 u}{\partial x^2}, \frac{\partial^2 u}{\partial y^2}$  exist, eindeutig und stetig in  $\mathcal{S}$ ,
- iv)  $u$  satisfies Laplace eq.  $\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$ .

$$v = \int_{x_0, y_0}^{x, y} \left\{ -\frac{\partial u}{\partial y} dx + \frac{\partial u}{\partial x} dy \right\}$$

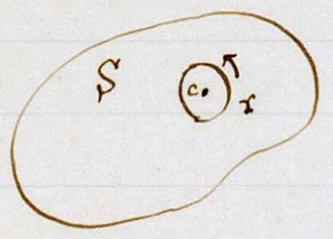

$+ i$  Integral  $\neq \mathcal{S} + i\mathcal{C}$ ,

$v, u + i$  Same properties  $\Rightarrow \mathcal{S} + i\mathcal{C}$

$$u + iv = f(z), \quad z = x + iy,$$

$\mathcal{S} \cup \mathcal{C} = \mathbb{C}$ ,  $f(z)$  in  $\mathcal{S} \neq \emptyset \Rightarrow$  eindeutig und stetig  $+ i$ .  $\mathcal{C} \neq \emptyset$  point  $\mathcal{S} \cup \mathcal{C}$ .

$$f(c) = \frac{1}{2\pi i} \int_{\mathcal{C}} \frac{f(z)}{z-c} dz$$

Put  $z-c = r e^{it}$ ,  
 $dz = i r e^{it} dt$ ,

$$f(c) = \frac{1}{2\pi i} \int_0^{2\pi} (u+iv) i dt = u(c) + i v(c).$$

$$\therefore u(c) = \frac{1}{2\pi} \int_0^{2\pi} u dt,$$

$$v(c) = \frac{1}{2\pi} \int_0^{2\pi} v dt.$$

$u(c), v(c)$  in circumference  $\mathcal{C}$ , value, arithmetic mean  $= \mathcal{S} + i\mathcal{C}$

$u(c)$  is circumference  $\pm$ , <sup>greatest</sup> maximum value  $\pm$  <sup>least</sup> minimum value  $\pm$  (in  $\pm$ ).

Harmonic function in  $\mathcal{S} + n$  Gebiet  $\pm$ , inner point =  $\bar{u}$  (mean value theorem)  $\pm$  greatest  $\pm$  least value  $\pm$   $\pm$   $\pm$   $\pm$ ;  $\pm$   $\pm$  greatest or least value  $\pm$   $\pm$   $\pm$   $\pm$ ;  $\pm$   $\pm$   $\pm$  Rand  $\pm$   $\pm$  point =  $\bar{u}$   $\pm$   $\pm$   $\pm$   $\pm$ .

$K \pm G$   $\pm$  equal  $\pm$   $\pm$ ,  $\pm$   $\pm$  Rand,  $\pm$   $\pm$   $\pm$   $\pm$   $\pm$   $\pm$  constant  $\pm$ .

$\pm$   $\pm$  Harmonic functions  $u, u'$   $\pm$ , Rand  $\pm$   $\pm$   $\pm$  same value  $\pm$   $\pm$   $\pm$ ,  $\pm$  function,  $\pm$   $\pm$  function  $\pm$   $\pm$   $\pm$  [proof  $\pm$ ]

### Erste Randwertaufgabe.

$u$   $\pm$  Gebiet  $\pm$ , Harmonic  $\pm$   $\pm$ .  $\pm$   $\pm$ ,  $\pm$   $\pm$  Rand  $\pm$   $\pm$   $\pm$  continuous  $\pm$ ,  $\pm$   $\pm$   $\frac{\partial u}{\partial x}, \frac{\partial u}{\partial y}$   $\pm$  Rand  $\pm$   $\pm$   $\pm$  continuous  $\pm$   $\pm$  assume  $\pm$ .

$v(x, y)$   $\pm$  function,  $\mathcal{S}$ ,  $\pm$   $\pm$  Rand  $\pm$   $\pm$   $\pm$  continuous  $\pm$   $\pm$   $\pm$   $\frac{\partial v}{\partial x}, \frac{\partial v}{\partial y}, \frac{\partial^2 v}{\partial x^2}, \frac{\partial^2 v}{\partial y^2}$   $\pm$   $\pm$   $\pm$ .  $\pm$   $\pm$   $\pm$ ,  $v$   $\pm$  Rand  $\pm$   $\pm$   $\pm$  value,  $\pm$   $\pm$   $\pm$  equal  $\pm$   $\pm$ .  $\pm$   $\pm$   $v$   $\pm$  Laplace eq.  $\pm$  satisfy  $\pm$   $\pm$ , assume  $\pm$ .

Theorem: 
$$J = \iint_{\mathcal{S}} \left[ \left( \frac{\partial v}{\partial x} \right)^2 + \left( \frac{\partial v}{\partial y} \right)^2 \right] dx dy$$

$\pm$   $\pm$  Integral  $\pm$ ,  $v = u$ ,  $\pm$   $\pm$  Minimum  $\pm$ .

Proof.  $v-u=h$ ,  $t \geq u$ ;  $v$  is a continuity property  
 $\Rightarrow$  the  $h$  satisfies  $\Delta h = 0$   $\Rightarrow$   $u$  &  $v$  are equal  
 +  $u$  the  $h$ , Rand  $\Delta = 0$ , vanishing function  $\Rightarrow$

$$v = u + h, \quad \frac{\partial v}{\partial x} = \frac{\partial u}{\partial x} + \frac{\partial h}{\partial x}, \quad \frac{\partial v}{\partial y} = \frac{\partial u}{\partial y} + \frac{\partial h}{\partial y}$$

$$J = \iint_{\mathcal{F}} \left[ \left( \frac{\partial u}{\partial x} \right)^2 + \left( \frac{\partial u}{\partial y} \right)^2 \right] dx dy + 2 \iint_{\mathcal{F}} \left[ \frac{\partial u}{\partial x} \frac{\partial h}{\partial x} + \frac{\partial u}{\partial y} \frac{\partial h}{\partial y} \right] dx dy + \iint_{\mathcal{F}} \left[ \left( \frac{\partial h}{\partial x} \right)^2 + \left( \frac{\partial h}{\partial y} \right)^2 \right] dx dy$$

$$\frac{\partial h}{\partial x} \frac{\partial u}{\partial x} = \frac{\partial}{\partial x} \left( h \frac{\partial u}{\partial x} \right) - h \frac{\partial^2 u}{\partial x^2}$$

$$\begin{aligned} \iint_{\mathcal{F}} \frac{\partial h}{\partial x} \frac{\partial u}{\partial x} dx dy &= \iint_{\mathcal{F}} \frac{\partial}{\partial x} \left( h \frac{\partial u}{\partial x} \right) dx dy - \iint_{\mathcal{F}} h \frac{\partial^2 u}{\partial x^2} dx dy \\ &= \int_{\partial \mathcal{F}} h \frac{\partial u}{\partial x} dy - \iint_{\mathcal{F}} h \frac{\partial^2 u}{\partial x^2} dx dy \end{aligned}$$

$$\begin{aligned} \iint_{\mathcal{F}} \left[ \frac{\partial u}{\partial x} \frac{\partial h}{\partial x} + \frac{\partial u}{\partial y} \frac{\partial h}{\partial y} \right] dx dy &= \int_{\partial \mathcal{F}} h \left( \frac{\partial u}{\partial x} dy - \frac{\partial u}{\partial y} dx \right) \\ &\quad - \iint_{\mathcal{F}} h \left( \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} \right) dx dy = 0 \end{aligned}$$

$h$ , Rand  $\Delta = 0$   
vanish on  $\partial \mathcal{F}$ .

$$\therefore J = \iint_{\mathcal{F}} \left[ \left( \frac{\partial u}{\partial x} \right)^2 + \left( \frac{\partial u}{\partial y} \right)^2 \right] dx dy + \iint_{\mathcal{F}} \left[ \left( \frac{\partial h}{\partial x} \right)^2 + \left( \frac{\partial h}{\partial y} \right)^2 \right] dx dy$$

$t \geq J$ ,  $h=0$ ,  $\nabla^2$  Min.  $t+u$ .

Converse Theorem:  $J = \iint_{\mathcal{F}} \left[ \left( \frac{\partial v}{\partial x} \right)^2 + \left( \frac{\partial v}{\partial y} \right)^2 \right] dx dy$

$\nabla^2 v = 0$ ,  $v = u$ ,  $\nabla^2$  Min.  $t+u$ ;  $\nabla^2$ , Laplace eq.  $\nabla^2$  満足  $\Delta$ .

proof.  $v = u + \alpha h$ , [ $\alpha$ , arbitr. const.]  
 $t \geq u$ ;

Theorem =  $\exists$   $u$  such that  $\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$  + boundary conditions.  
 $u =$  function  $u$  on  $\bar{D}$ , Rand,  $u = f$  on  $\partial D$ , value  $f$   
 $u$  is Harmonic f. +1.

Thomson-Dirichlet's principle.  $\Rightarrow$  integral, lower limit, minimum exist on  $\bar{D}$  +1.  
 +1. [Riemann, Abelian t. application.]

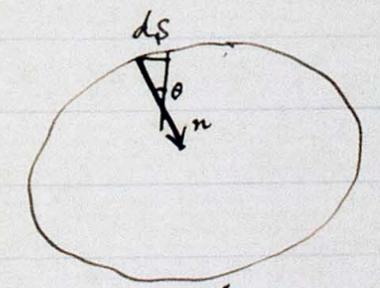

Carl Neumann "Methode des arithmetischen Mittels" used to prove it. Other Schwarz, Poincare, Hilbert (Calculus of Variation, 1899) proof +1.

Riemann / proof / Lemma =  $\bar{D}$ ,  $U, V$  two f.  $\Rightarrow$   $\bar{D}$  is compact and stetig =  $\bar{D}$ ,  $U, V$ ,  $x, y =$  first derivative on Rand,  $U, V$  stetig,  $\frac{\partial^2 U}{\partial x^2}, \dots$  on  $\bar{D}$ ,  $U, V =$  stetig +1.

$$\iint_D \left( \frac{\partial U}{\partial x} \frac{\partial V}{\partial x} + \frac{\partial U}{\partial y} \frac{\partial V}{\partial y} \right) dx dy = \int_{\partial D} U \left[ \frac{\partial V}{\partial x} dy - \frac{\partial V}{\partial y} dx \right] - \iint_D U \Delta V dx dy$$

(3)

where  $\Delta V = \frac{\partial^2 V}{\partial x^2} + \frac{\partial^2 V}{\partial y^2}$ .

$$dy = -ds \sin \theta, \quad dx = -ds \cos \theta$$

$$\frac{\partial V}{\partial x} dy - \frac{\partial V}{\partial y} dx = -ds \left( \frac{\partial V}{\partial x} \sin \theta - \frac{\partial V}{\partial y} \cos \theta \right)$$

$dn$  on  $xy$ ,  $\vec{n}$  = decompose  $dx, dy$ .  
 $\sin \theta = \frac{dx}{dn}, \quad \cos \theta = -\frac{dy}{dn}$

$$\frac{\partial V}{\partial x} dy - \frac{\partial V}{\partial y} dx = -d\phi \left( \frac{\partial V}{\partial x} \sin \theta - \frac{\partial V}{\partial y} \cos \theta \right)$$

$$= -d\phi \left( \frac{\partial V}{\partial x} \frac{dx}{dn} + \frac{\partial V}{\partial y} \frac{dy}{dn} \right) = -\frac{\partial V}{\partial n} d\phi.$$

$$\iint_{\mathcal{D}} \left( \frac{\partial \sigma}{\partial x} \frac{\partial V}{\partial x} + \frac{\partial \sigma}{\partial y} \frac{\partial V}{\partial y} \right) dx dy = - \int_{\mathcal{D}} \sigma \frac{dV}{dn} d\phi - \iint_{\mathcal{D}} \sigma \Delta V dx dy$$

$$= - \int_{\mathcal{D}} \sigma \frac{d\sigma}{dn} d\phi - \iint_{\mathcal{D}} \sigma \Delta \sigma dx dy$$

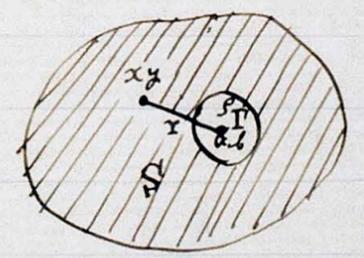

$$\int_{\mathcal{D}} \left( \sigma \frac{dV}{dn} - V \frac{d\sigma}{dn} \right) d\phi + \iint_{\mathcal{D}} (\sigma \Delta V - V \Delta \sigma) dx dy = 0$$

Green's Theorem.

$\sigma, V$  在  $\mathcal{D}$  中  $\Delta = 0$  的调和函数  $\Rightarrow \Delta V = 0 + u \Rightarrow V = u$

$$\int_{\mathcal{D}} \left( \sigma \frac{dV}{dn} - V \frac{d\sigma}{dn} \right) d\phi = 0.$$

$\sigma = 1$  在  $\mathcal{D}$  中调和函数  $\Rightarrow \Delta \sigma = 0$   $\int_{\mathcal{D}} \frac{dV}{dn} d\phi = 0.$

$$r^2 = (x-a)^2 + (y-b)^2.$$

$\mathcal{D} = \Gamma + n$  区域  $\mathcal{D} = \Gamma$  的  $\log r$  是单值的且连续的。  $\sigma = \log r$   $V$  在  $\mathcal{D}$  中  $\Delta = 0$

调和函数  $\Rightarrow \Delta \sigma = 0$   $\int_{\mathcal{D}} \left( \log r \frac{dV}{dn} - V \frac{d \log r}{dn} \right) d\phi = 0.$

$\epsilon \in (a, b)$  在  $\mathcal{D}$  中,  $\Gamma$  点  $\Rightarrow$

$$\int_{\mathcal{D}} \left( \log r \frac{dV}{dn} - V \frac{d \log r}{dn} \right) d\phi = 0.$$

$\Rightarrow$   $V(a, b) = \frac{1}{2\pi} \int_{\mathcal{D}} \left( \log r \frac{dV}{dn} - V \frac{d \log r}{dn} \right) d\phi$   $\Rightarrow$  得  $[proof 7.2]$

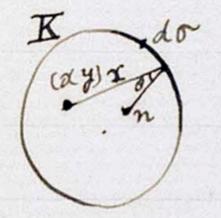

$$V(a,b) = \frac{1}{2\pi R} \int_{(K)} \frac{V(R^2 - \rho^2)}{r^2} d\sigma$$

M, polar coordinates  $\Rightarrow M(R, \Psi)$  " "  
 A, " " " " A( $\rho, \psi$ ) "

$$r^2 = R^2 + \rho^2 - 2R\rho \cos(\Psi - \psi)$$

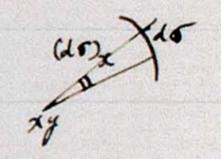

$$V(a,b) = \frac{1}{2\pi} \int_0^{2\pi} \frac{V(R^2 - \rho^2)}{R^2 - 2R\rho \cos(\Psi - \psi) + \rho^2} d\Psi$$

Carl Neumann's Method and its Extension.

$$w_x = \int_{(K)} \frac{\partial}{\partial n} \left\{ \log \frac{1}{r} \right\} d\sigma \quad + n \text{ Integral } \neq \frac{1}{5} r^2$$

$$= \int_{(K)} -\frac{1}{r} \frac{dr}{dn} d\sigma = \int_{(K)} \frac{\cos \theta}{r} d\sigma$$

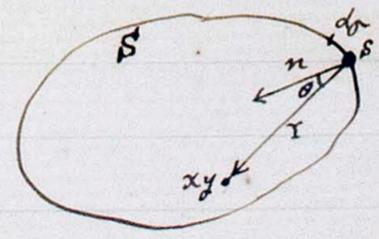

$$\therefore w_x = \int_{(K)} (d\sigma)_x \quad [\text{angle}]$$

$$f(\xi) = \int_{\textcircled{D}} \varphi \frac{\partial}{\partial n} (\log \frac{1}{r}) d\sigma + \pi \cdot \varphi(\xi).$$

$\forall \xi = \varphi(\xi)$   $\forall$  unknown +  $\forall \xi$ ,  $\forall$  Rand  $\forall \xi$   $\forall \xi \in n$   $\forall \xi$   $\forall \xi$  distance  $\forall \xi$ .

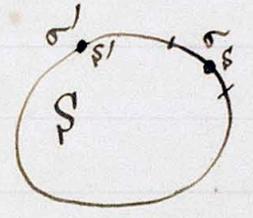

1st:  $\Phi_x = \int_{\sigma} \epsilon \frac{\partial}{\partial n} \log\left(\frac{1}{r}\right) dn d\sigma$   
 $\epsilon dn = \rho. \quad 1st: \Phi_x = \int_{\sigma} \rho \frac{\partial}{\partial n} \log\left(\frac{1}{r}\right) d\sigma.$

2nd: Our problem, Potential of the surface density der Doppelbelegung  $\Rightarrow$  the 1st problem = is.

Solution of our problem.

Let  $S$  be a convex + n Gebiet + i

$J_x^{\sigma} = \int_{\sigma} \frac{\partial}{\partial n} \log \frac{1}{r} d\sigma. \Rightarrow \frac{1}{2} \int_{\sigma} \frac{\partial}{\partial n} \log \frac{1}{r} d\sigma$

$\begin{cases} J_S^{\sigma} = \int_{\sigma} (d\sigma)_{\sigma} \\ J_{S'}^{\sigma'} = \int_{\sigma'} (d\sigma)_{\sigma'} \end{cases} \quad \text{Let } J = \frac{J_S^{\sigma} + J_{S'}^{\sigma'}}{2\pi} \quad 1st: \dots$

2nd: Equation

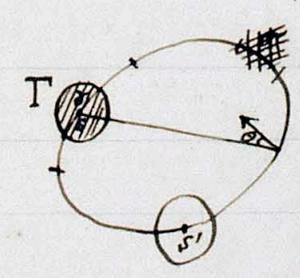

$0 < J \leq 1$ , existence  $\Rightarrow$  proved.

$J_S^{\sigma}, J_{S'}^{\sigma'}$   $\pi$   $\Rightarrow$   $1, +1$ .  $\Rightarrow$  Gebiet  $\sigma$  convex + n  $\Rightarrow$  follows.

$J_S^{\sigma} \leq \pi, \quad J_{S'}^{\sigma'} \leq \pi.$

$\therefore \frac{J_S^{\sigma} + J_{S'}^{\sigma'}}{2\pi} \leq 1.$

$J > 0$  + n  $\Rightarrow$  prove zu  $\frac{1}{2} \int_{\sigma} \dots$ ,  $S$  + n point  $\Rightarrow$  Rand  $\perp$  = straight

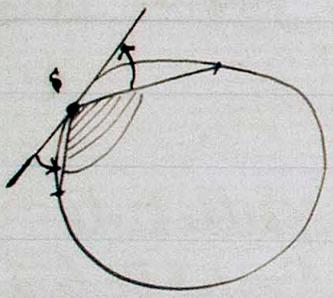

line  $\neq \cos \theta \neq 1$   $\Rightarrow$   $\epsilon \neq 0$   $\Rightarrow$   $\mu$   $\neq 0$  + n portion  $\neq 1$   $\mu$  + n  $\cos \theta$   $\neq$  zero + n positive quantity + n. angle, absolute value  $\neq \frac{\pi}{2}$   $\Rightarrow$   $1, +1$   $\Rightarrow$   $\cos \theta > 0$ .

Let  $0 = \epsilon \rho \neq 0$ .  $0 + n \neq 1$ .  $\theta = 90^\circ + n + 1$ .  $\gamma \neq 0$ .

Let  $\mu = \frac{1}{2} \int_{\sigma} \dots$   $\cos \theta \neq 0$ .

$\sigma$  + n arc,  $\perp$  = point  $\neq 0$ ,  $\neq$ ,  $\cos \theta$ , unter Grenz  $\neq m$   $\neq$ ,  $\neq$   $\Rightarrow$   $1, \mu$   $\neq$ , distance =  $\neq$  Obere Grenz  $\neq$ .  $\Rightarrow$   $M$  +

$$J_s^\sigma = \int_{\sigma_1}^{\sigma_2} \frac{cr\theta}{r} d\sigma > \frac{m}{M} \int_{\sigma_1}^{\sigma_2} d\sigma = \frac{m}{M} (\sigma_2 - \sigma_1)$$

$$J_{s'}^{\sigma'} > \frac{m}{M} (\sigma'_2 - \sigma'_1)$$

$$J > \frac{m}{2\pi M} (\rho - r - r') \quad \text{f. Rand.}$$

$r, r' \neq$  suff. small  $\Rightarrow$   $\rho - r - r' > 0$ .  $\therefore J > 0$ .

$\therefore 0 < u < J \leq 1$ .

$\varphi$  in  $S$  is continuous  $\Rightarrow$   $\varphi$  has a value in  $S$ .  $\varphi$  in  $G$  is  $\varphi$  in  $G$ .  
 = Obere Grenz  $G$  + Unter Grenz  $K$  +  $\pi$ .

$$G > \varphi > K.$$

$\therefore$  Rand  $\neq$   $\frac{G+K}{2}$

$$\begin{cases} \sigma : & G > \varphi > \frac{G+K}{2} \\ \sigma' : & \frac{G+K}{2} > \varphi' > K \end{cases} \quad \text{ist}$$

$$\Phi_x = \int \varphi \frac{cr\theta}{r} d\sigma$$

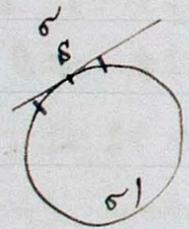

$$\sigma : \left. \begin{aligned} \Phi_s &\leq G \int_{\sigma} \frac{cr\theta}{r} d\sigma + \frac{G+K}{2} \int_{\sigma'} \frac{cr\theta}{r} d\sigma \end{aligned} \right\}$$

$$\sigma' : \left. \begin{aligned} \Phi_s &\geq \frac{G+K}{2} \int_{\sigma} \frac{cr\theta}{r} d\sigma + K \int_{\sigma'} \frac{cr\theta}{r} d\sigma \end{aligned} \right\}$$

$$\therefore \left. \begin{aligned} \Phi_s &\leq G J_s^\sigma + \frac{G+K}{2} J_s^{\sigma'} \\ \Phi_s &\geq \frac{G+K}{2} J_s^\sigma + K J_s^{\sigma'} \end{aligned} \right\}$$

$$\therefore \left. \begin{aligned} \Phi_s &\leq \pi G - \frac{G-K}{2} J_s^{\sigma'} \\ \Phi_s &\geq \pi K + \frac{G-K}{2} J_s^{\sigma'} \end{aligned} \right\}$$

$$J_s^\sigma + J_s^{\sigma'} = \pi$$

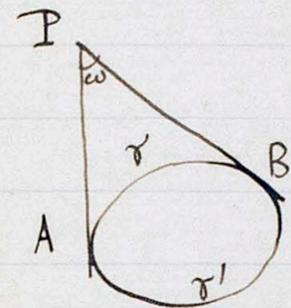

∴ exist z.

∴ R = S 以外, point (z, u) ≠ E<sub>1</sub>

$$\begin{aligned}
 -\varphi_p(z, u) &= \int \{ \varphi_{p-1} - \varphi_{p-1}(z) \} \frac{d \log \frac{1}{r}}{dn} d\sigma \\
 &= \int_{\text{Ⓢ}} \varphi_{p-1} \frac{d \log \frac{1}{r}}{dn} d\sigma - \varphi_{p-1}(z) \int_{\text{Ⓢ}} \frac{\cos \theta}{r} d\sigma
 \end{aligned}$$

∴ last integral is zero + with

$$\underline{-\varphi_p(z) = \int_{\text{Ⓢ}} \varphi_{p-1} \frac{d \log(\frac{1}{r})}{dn} d\sigma.}$$

$$\left| \int_{\text{Ⓢ}} \frac{\cos \theta}{r} d\sigma \right| = \omega, \quad \left| \int_{\text{Ⓢ}} \frac{\cos \theta}{r'} d\sigma \right| = \omega.$$

$\varphi_p$ , greatest value  $\Rightarrow G_p$ , least  $\Rightarrow K_p$  t s

$$|\varphi_p(z, u)| \leq |G_{p-1} - K_{p-1}| \omega.$$

今 P  $\ni$  直線 R d = (T)  $\ni$   $\theta \in 4 \text{ 区}$ , Rand =  $\bar{r}(z, u) \omega_p \dots \pi t + u$

$$|\varphi_p(z)| \leq \pi |G_{p-1} - K_{p-1}|$$

$$G_1 - K_1 \leq \pi (G - K) (1 - u)$$

$\Rightarrow$  prove z 同 t same process =  $\exists$   $\exists$   $\exists$

$$G_2 - K_2 \leq \pi (G_1 - K_1) (1 - u).$$

.....

$$G_{p-1} - K_{p-1} \leq \pi (G_{p-1} - K_{p-1}) (1 - u).$$

$$|\varphi_p(z)| \leq \pi^2 (1 - u) (G_{p-2} - K_{p-2})$$

$$\leq \pi^p (1 - u)^{p-1} (G - K).$$

$$\therefore \left| \frac{\varphi_p(z)}{(2\pi)^p} \right| \leq \frac{G - K}{2} \left( \frac{1 - u}{2} \right)^{p-1}.$$

### Chapter III. Hilbert's Investigations.

Fredholm, 1903 = Hilbert, Göttinger Nachrichten, (1904-6) 3<sup>mit</sup>  
 1907 Schmidt, Dissertation = Math. Ann. Bd. 63-64 (1907)  
 が来る。

Hilbert's Theorem: 一般, equation, Kern かの symmetric  
 function, case = reduce する 証明.

Proof.  $f(s) = \varphi(s) - \lambda \int_0^1 K(s, t) \varphi(t) dt.$

variable  $s \Rightarrow t, t \Rightarrow \gamma \Rightarrow$  substitute する

$$f(t) = \varphi(t) - \lambda \int_0^1 K(t, \gamma) \varphi(\gamma) d\gamma. \quad \Rightarrow \int_0^1 K(t, s) dt \Rightarrow \int_0^1 \dots$$

$$\int_0^1 K(t, s) f(t) dt = \int_0^1 K(t, s) \varphi(t) dt - \lambda \int_0^1 \int_0^1 K(t, s) K(t, \gamma) \varphi(\gamma) d\gamma dt$$

$\Rightarrow \int_0^1 K(t, s) f(t) dt = \int_0^1 K(t, s) \varphi(t) dt - \lambda \int_0^1 \int_0^1 K(t, s) K(t, \gamma) \varphi(\gamma) d\gamma dt.$

$$f(s) - \lambda \int_0^1 K(t, s) f(t) dt = \varphi(s) - \lambda \int_0^1 K(s, t) \varphi(t) dt - \lambda \int_0^1 K(t, s) \varphi(t) dt + \lambda^2 \int_0^1 \int_0^1 K(t, s) K(t, \gamma) \varphi(\gamma) d\gamma dt.$$

$$= \varphi(s) - \lambda \int_0^1 \varphi(t) dt [K(s, t) + K(t, s) - \lambda \int_0^1 K(\gamma, s) K(\gamma, t) d\gamma].$$

§ 12) function  $f(s) - \lambda \int_0^1 K(t, s) f(t) dt \Rightarrow F(s) \neq 0,$

$$K(s, t) + K(t, s) - \lambda \int_0^1 K(\gamma, s) K(\gamma, t) d\gamma \Rightarrow Q \neq 0$$

$$F(s) = \varphi(s) - \lambda \int_0^1 Q(s, t) \varphi(t) dt.$$

1)  $F(s)$  known function  $\neq 0, Q(s, t) \in$  known function

$= \int \int \delta(t-t) = \int \delta(t-t) \text{ symmetric } (+)$ .

$\Rightarrow$  Theorem 11 prove  $\exists \lambda (+)$ .

Conversely  $=$ , if equation  $\exists$  satisfied by  $z_n \varphi(x)$ ,  $\bar{\lambda}$  equation  $\exists$  satisfied by  $z_{t-1} \gamma$ , follows  $\exists \lambda$ :

$$f(x) = \varphi(x) - \lambda \int_0^1 K(x,t) \varphi(t) dt. \quad K(x,t) = K(t,x)$$

$\Rightarrow$  Hilbert's Integralgleichung  $\exists$ .

### Linear Algebraic Equations.

$$K_{pq} = K\left(\frac{p}{n}, \frac{q}{n}\right) \quad p, q = 1, 2, \dots, n.$$

$$Kx = K_{11}x_1 + K_{12}x_2 + K_{21}x_2 + \dots + K_{nn}x_n \\ = \sum_{p,q} K_{pq} x_p x_q.$$

$K_{pq} = K_{qp}$ ,  $\Rightarrow$   $K$  is symmetric  $\Rightarrow$  follows.

$$\varphi_p = \varphi\left(\frac{p}{n}\right), \quad f_p = f\left(\frac{p}{n}\right).$$

$$\left\{ \begin{array}{l} Kx_1 = K_{11}x_1 + K_{12}x_2 + K_{13}x_3 + \dots + K_{1n}x_n \\ Kx_2 = K_{21}x_1 + K_{22}x_2 + K_{23}x_3 + \dots + K_{2n}x_n \\ \dots \dots \dots \\ Kx_n = K_{n1}x_1 + K_{n2}x_2 + K_{n3}x_3 + \dots + K_{nn}x_n \end{array} \right.$$

$$[x, y] = x_1y_1 + x_2y_2 + \dots + x_ny_n.$$

$$\underline{K_{xy} = [Kx, y] = [Ky, x]}$$

Proof:  $[Kx, y] = K_{11}x_1y_1 + K_{12}x_2y_2 + \dots + K_{1n}x_1y_n$

$$= (K_{11}x_1 + K_{12}x_2 + \dots + K_{1n}x_n)y_1 + \dots + (K_{n1}x_1 + \dots + K_{nn}x_n)y_n$$

$\Rightarrow$   $K_{pq} = K_{qp} \quad \exists$

$$= K_{xy}$$

$\Rightarrow$  得。

$$A \begin{cases} f_1 = \varphi_1 - l \cdot (K_{11} \cdot \varphi_1 + K_{12} \cdot \varphi_2 + \dots + K_{1n} \cdot \varphi_n) = \varphi_1 - l K \varphi_1 \\ f_2 = \varphi_2 - l \cdot (K_{21} \cdot \varphi_1 + K_{22} \cdot \varphi_2 + \dots + K_{2n} \cdot \varphi_n) = \varphi_2 - l K \varphi_2 \\ \dots \\ f_n = \varphi_n - l \cdot (K_{n1} \cdot \varphi_1 + K_{n2} \cdot \varphi_2 + \dots + K_{nn} \cdot \varphi_n) = \varphi_n - l K \varphi_n \end{cases}$$

$\exists \exists \exists \exists$ .  $\therefore \varphi = \sum_{i=1}^n \varphi_i$  non homogeneous linear equation =  $\exists \exists$ ,  
 $f_1, f_2, \dots, f_n, K_{11}, K_{12}, \dots$  given  $\exists \exists \exists \exists$ ,  $\varphi_1, \varphi_2, \dots, \varphi_n \exists$ .  
 unknown quantity  $\exists \exists \exists$  solve  $\exists \exists \exists$ .

$$d(l) = \begin{vmatrix} 1-lK_{11} & -lK_{12} & \dots & -lK_{1n} \\ -lK_{21} & 1-lK_{22} & \dots & -lK_{2n} \\ \dots & \dots & \dots & \dots \\ -lK_{n1} & -lK_{n2} & \dots & 1-lK_{nn} \end{vmatrix} = \text{Discriminant of the quadratic form } [x, x] - l K x x.$$

$\Rightarrow$  Bordered determinant  $\exists \exists \exists \exists$ .

$$D(l, x) = \begin{vmatrix} 0 & x_1 & x_2 & \dots & x_n \\ y_1 & 1-lK_{11} & -lK_{12} & \dots & -lK_{1n} \\ y_2 & -lK_{21} & 1-lK_{22} & \dots & -lK_{2n} \\ \vdots & \vdots & \vdots & \dots & \vdots \\ y_n & -lK_{n1} & -lK_{n2} & \dots & 1-lK_{nn} \end{vmatrix}$$

$\exists$  determinant  $\exists \exists \exists$ ,  $y_1, y_2, \dots, y_n$   $\exists \exists \exists \exists$   $K_{y_1}, K_{y_2}, \dots, K_{y_n}$   
 $\exists \exists \exists \exists$   $D(l, K_y) = \exists \exists \exists \exists$ ;  $\exists \exists \exists \exists$  determinant  
 $\exists \exists \exists \exists$  relation  $\exists \exists \exists \exists$ .

$$D(l, K_y) = \begin{vmatrix} 0 & x_1 & \dots & x_n \\ K_{11}y_1 + \dots + K_{1n}y_n & 1-lK_{11} & \dots & -lK_{1n} \\ K_{21}y_1 + \dots + K_{2n}y_n & -lK_{21} & \dots & -lK_{2n} \\ \dots & \dots & \dots & \dots \\ K_{n1}y_1 + \dots + K_{nn}y_n & -lK_{n1} & \dots & 1-lK_{nn} \end{vmatrix}$$

$\exists$  determinant =  $\exists \exists \exists \exists$ ,  $\exists \exists \exists \exists$  first row =  $\exists \exists \exists \exists$ .  
 $\exists \exists \exists \exists$  each col =  $\exists \exists \exists \exists$   $y_1, y_2, \dots, y_n \exists \exists \exists \exists$

$$l D(l, \begin{matrix} x \\ K_y \end{matrix}) = \begin{vmatrix} [xy] & x_1 & x_2 & \dots & x_n \\ y_1 & 1-lK_{11} & -lK_{21} & \dots & -lK_{n1} \\ y_2 & -lK_{12} & 1-lK_{22} & \dots & -lK_{n2} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ y_n & -lK_{n1} & -lK_{n2} & \dots & 1-lK_{nn} \end{vmatrix}$$

$$= [xy] d(l) + D(l, \begin{matrix} x \\ y \end{matrix})$$

即ち  $l D(l, \begin{matrix} x \\ K_y \end{matrix}) = [xy] d(l) + D(l, \begin{matrix} x \\ y \end{matrix})$  (1)

A 1 式 =  $y_1, y_2, \dots, y_n$  を加して add する。

$$[f, y] = [\varphi, y] - l [K\varphi, y]$$

故に equation A を satisfy する  $\varphi$  は 1 equation を satisfy する。

$$[x, y] = [y, x] + u \text{ 等 } \tau, [K\varphi, y] = [K_y, \varphi]$$

$$+ \text{ 故 } [f, y] = [\varphi, y] - l [\varphi, K_y] \quad (2)$$

を satisfy する  $f = \varphi$  を determine する (可なり)。

(1) + (2) + 等  $\tau$

$$[x, y] = - \frac{D(l, \begin{matrix} x \\ y \end{matrix})}{d(l)} + l \frac{D(l, \begin{matrix} x \\ K_y \end{matrix})}{d(l)} \quad (3)$$

今  $d(l) \neq 0$  として assume する。

(3) により  $x, y$  は 恒等的関係 + u 等  $\tau$

$$[f, y] = - \frac{D(l, \begin{matrix} f \\ y \end{matrix})}{d(l)} + l \frac{D(l, \begin{matrix} f \\ K_y \end{matrix})}{d(l)}$$

$$[f, y] = - \left[ \frac{D(l, \begin{matrix} f \\ \eta \end{matrix})}{d(l)} \right]_{\eta=y} + l \left[ \frac{D(l, \begin{matrix} f \\ \eta \end{matrix})}{d(l)} \right]_{\eta=K_y}$$

$$[\varphi, y] = [\varphi, \eta]_{y=\eta} - \frac{D(l, \begin{matrix} \varphi \\ \eta \end{matrix})}{d(l)}$$

か 入り 来る。 故に

$$[\varphi, y] = - \frac{D(l, \begin{matrix} \varphi \\ y \end{matrix})}{d(l)}$$

と 取 引 け ば, quantity 恒等的

= satisfy  $\epsilon \leq n$ .

故  $= d(l) \neq 0$   $+ n \neq 1$ ,  $\Rightarrow$   $y$ , coefficient of  $y_1, y_2, \dots, y_n$   $+ n$ .  $\Rightarrow$   $\therefore$  solution  $+ 1$ . original equation is linear  $+ n$  故,  $\Rightarrow$   $\therefore$   $\eta =$  solution  $+ \epsilon$ .

$=$   $d(l) = 0$   $\dagger + n$  Case:

$$\begin{vmatrix} \frac{1}{l} - K_{11} & -K_{12} & \dots & -K_{1n} \\ -K_{21} & \frac{1}{l} - K_{22} & \dots & -K_{2n} \\ \dots & \dots & \dots & \dots \\ -K_{n1} & -K_{n2} & \dots & -K_{nn} \end{vmatrix} = 0.$$

$d(l)$ , Roots,  $\epsilon \leq n$  real quantities  $= \epsilon \tau$ ,  $\Rightarrow \therefore l^{(1)}, l^{(2)}, \dots, l^{(n)}$   $\dagger$   $\epsilon$ ,  $\Rightarrow \therefore$  root,  $\epsilon \leq n$  different  $+ 1$   $\dagger$  assume  $\epsilon$ .

$$d(l) = \begin{vmatrix} -K_{11} & -K_{12} & \dots & -K_{1n} \\ -lK_{21} & 1-lK_{22} & \dots & -lK_{2n} \\ \dots & \dots & \dots & \dots \\ -lK_{n1} & -lK_{n2} & \dots & 1-lK_{nn} \end{vmatrix} + \dots + \begin{vmatrix} 1-lK_{11} & -lK_{12} & \dots & -lK_{1n} \\ -lK_{21} & 1-lK_{22} & \dots & -lK_{2n} \\ \dots & \dots & \dots & \dots \\ -K_{n1} & -K_{n2} & \dots & -K_{nn} \end{vmatrix}.$$

$$n d(l) - l d'(l) = \begin{vmatrix} 1 & 0 & \dots & 0 \\ -lK_{21} & 1-lK_{22} & \dots & -lK_{2n} \\ \dots & \dots & \dots & \dots \\ -lK_{n1} & -lK_{n2} & \dots & 1-lK_{nn} \end{vmatrix} + \begin{vmatrix} 1-lK_{11} & -lK_{12} & \dots & -lK_{1n} \\ 0 & 1 & \dots & 0 \\ \dots & \dots & \dots & \dots \\ 0 & 0 & \dots & 1 \end{vmatrix} + \dots + \begin{vmatrix} 1-lK_{11} & -lK_{12} & \dots & -lK_{1n} \\ -lK_{21} & 1-lK_{22} & \dots & -lK_{2n} \\ \dots & \dots & \dots & \dots \\ 0 & 0 & \dots & 1 \end{vmatrix} = d_{11}(l) + d_{22}(l) + \dots + d_{nn}(l).$$

$\therefore$   $d_{11}(l) + d_{22}(l) + \dots + d_{nn}(l) = n d(l) - l d'(l)$ .

今  $l = l^{(h)}$   $+ n$  root  $\Rightarrow l$  はず  $\lambda \leq n$ .

$$d_{11}(l^{(h)}) + d_{22}(l^{(h)}) + \dots + d_{nn}(l^{(h)}) = -l^{(h)} d'(l^{(h)}).$$

$l^{(h)}$ ,  $\Rightarrow$   $\therefore$  zero  $+ n$   $\dagger$   $\epsilon$ ,  $\dagger$   $\therefore$   $\therefore$   $d(l)$ ,  $\dagger$   $\therefore$   $l = 0$   $\dagger$   $\therefore$   $\lambda \leq n$ .

determinant / diagonal term  $\neq 0$  if  $\epsilon_0 \neq 1$  (other,  $0 < \epsilon < 1$ )  
 $\neq 0$ ,  $\neq 0$  / determinant  $\neq 0$  if  $\epsilon_0 \neq 1$  (other,  $0 < \epsilon < 1$ ).
